

17 January 2014

Dear Dolby DP568 owner:

Dolby is pleased to announce the General Availability of V1.3 software update for the DP568 Professional Reference Decoder. These new Deliverables can be obtained at no additional cost and will be delivered through Dolby Deliverables on Demand ([www.dolbycustomer.com](http://www.dolbycustomer.com)), our online service intended to make it easier and faster for you to obtain Dolby development kits and new Deliverables. Please contact [deliverables@dolby.com](mailto:deliverables@dolby.com) for instructions on how to access this service if you have not previously received those instructions. If you have forgotten your Dolby Deliverables on Demand password, a new one can be obtained here:  
<https://www.dolbycustomer.com/forgotpassword.aspx>

#### **Overview of the DP568 V1.3 Update**

The DP568 is a strategic tool which will be used by broadcast, OEM, and content creation partners to verify proper functionality of latest generation Dolby encoders/decoders in their products and workflow chains. Additional information about the DP568, including a data sheet, can be found on [www.dolby.com](http://www.dolby.com).

This update will provide the following improvements and functionalities:

- Loudness mode: Added support for a separate EBU mode, ITU-R BS.1770-2 with Dolby Dialogue Intelligence™.
- Headphone output: Users can select the channel monitored by the headphone output.
- SDI input: Improved SDI stability.

To help you meet the latest requirements of broadcasters and operators, these Deliverables may be used to update, at no additional cost, the DP568's you have already sold and that are still under SW maintenance.

Kind regards,

Montfort de Lattre  
Product Manager, Broadcast  
Dolby Laboratories, Inc.
